THE ACID SOLUBLE ANTIGENS OF ERYSIPELOTHRIX RHOSIOPATHIAE. [1961] 10p.
Available on loan from SLA 61-18697

Trans. of a German language article from an unidentified source, n.d.

DESCRIPTORS: *Swine erysipelas, *Actinomyus, *Antigens, Precipitation, Complement, *Vaccines

Two serological variants, A and B, of the erysipelas incite, Erysipelothrix rhusiopathiae, are described which are characterized by a variant-specific acid-soluble antigen. In some strains these antigens are lacking. The antigens are proven by precipitation, agglutination and compliment fixation. For production of killed vaccines after Traub only strains of group B are suitable. (Author)

The space-time temperature distribution which appears during the preparation of glass objects in the parison mold and in the glass is mathematically ascertained. It is assumed that a thin heat-insulating layer can form between the hot glass and the inner wall of the mold. The relation is shown between the temperature distribution, the thermal constants of glass and mold and the working conditions prevailing in the preparation of glass objects is communicated. Special cases are numerically calculated with the aid of an electronic analogue computer. (Author)

A description is given of an arrangement of infrared radiators and receivers which is suitable for photoelastic investigations. Stresses in translucent and dark-colored glasses can be rendered visible with the aid of an image converter which is sensitive in the infrared spectral range.
